STREAMLINED

F.I.Z. CONTROL

HOW DO YOU CONTROL YOUR LENS WITHOUT LOSING CONTROL OF YOUR BUILD?

(with any major F.I.Z. system)

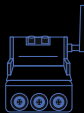

IT CAN BECOME A LOT TO MANAGE, BUT...

The traditional Focus-Iris-Zoom setup is made up of the following components:

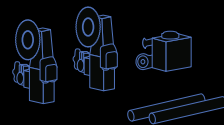

power cable

MDR box

motor cables

external motors

BY USING AN INTEGRATED F.I.Z. MODULE

the MDR box moves inside the camera and we can lose its power cable

BY USING INTERNALLY MOTORIZED LENSES

you can also lose the external motors and their cables

YOU CAN SIMPLIFY YOUR BUILD FOR ANY SETUP

from Steadicam to studio

AND WITH DXL2, YOU CAN WORK WITH ALL MAJOR F.I.Z. SYSTEMS

CMOTION

PRESTON

ARRI

TERADEK
